In the output window I can see the following text being displayed: System Windows.. Try casting the return to System Windows Media Brush Could you provide a simplified example for us to repro the issue? a compressed file would be fine.. But it works fine It's my steps Firstly I quote your XAML Code, but for displaying some information in DataGrid Control, I create a Student class.. What should I be returning? As far as I know I am returning a Brush so why is the system complaining? Could this be a namespace issue such that the wrong sort of Brush is being returned?Richard Lewis HaggardI created a WPF Application to repro this issue.. My first attempt to do this has not been successful In XAML, a converter has been declared plus a style that should invoke the converter.. Later, a wpf toolkit DataGride is declared and the style is applied to it The intent is put a DataTable in the Model and bind that DataTable to the DataGrid.. Marked as answer by Richard Haggard Friday, July 19, 2013 1:58 PMYou should return a System.. So as to we can have a clear idea of figuring out the issue Here some related Threads. 773a7aa168 Bird Watcher crack+all fatal errors fixed
